

## **STEVAN P. BOŠKOVIĆ AS AN EXCELENT OBSERVER**

Stevan P. Bošković (1868-1957) known geodezist and scientist, besides a number of other works gave a significant contribution to our astronomy determining for purposes of geodezy and cartography declination of vertical on the territory of Serbia in the beginning of XX century. Moreover, between the First and Second World War he organized two determinations of the geographical longitude of Belgrade. We demonstrate here, on several examples that he was an excellent observer.
