

COSMICAL MOTIFS IN SERBIAN MEDIEVAL NUMISMATICS

An attempt has been made, to systematize, organize, make available and present to astronomical community, cosmical symbols and motifs in serbian medieval numismatics, as well as to provide elements of a possible methodological approach for such analysis. The accent was put on the appearance of stars, Sun and crescent moon, in order to present astronomical and cosmical interactions with numismatical science and to point out on an additional aspect of the interdisciplinarity of astronomy. The basis for this research , was *Catalogue of serbian medieval coins* by Sergije Dimitrijević and his other numismatical works.
